Las Vegas' Smart City Receives CISCO Accreditation

Las Vegas, Nev. _Smart City, the largest telecommunications company whose headquarters is in Las Vegas, has just been accepted to the Cisco Powered Network Program with a designation of the Cisco Mobile Office. This program is only open to the top 1% of telecommunications service providers worldwide, with a focus on companies who have the ability to expand the boundaries of current technology.

The advantage of this partnership to the customer is that it allows Smart City to provide leading edge technology with full access to the latest Cisco engineering developments. This is especially important in the hospitality industry, where customers base their event planning decisions on access to the latest technology.

"Seeing the Cisco Powered Network mark tells you a lot about the service provider who displays it. A service provider who can show this mark has earned the right, on a service-by-service basis, not only by building the services end to end with Cisco equipment, but also by maintaining high levels of service quality. This mark lets your IT and network operations groups know that the provider's services are safe, reliable, and secure," said Paul Ashley, Smart City President.

"Why should you choose a service provider who displays the Cisco Powered Network logo? By displaying this mark, we are telling you a lot about our services. It tells you we've earned the right to display this mark by maintaining high levels of network quality and by basing services end-to-end on Cisco equipment—the same equipment that virtually all Internet traffic travels on today," adds Ashley.

Less than 500 of the most successful service providers around the world are members of the Cisco Powered Network program. Situated in more than 62 countries, program members offer a wide range of Cisco-based services for small and large businesses alike. From the basics like Internet access and web hosting to emerging services like IP Telephony, Wireless Data Services and Storage Networking, they should be your first choice when you need to out-task a part of your network.

Smart City has been designing, installing and maintaining telecommunications networks nationwide since 1983, where they began by providing telecommunications to the Houston Astrodome. Currently, they provide full range network services to 13 convention centers nation wide, as well as hospitality giants like Disney World. Smart City also provides internet service, VDS technology, and web hosting to Southern Florida, through their company MpiNet.
